

SIGMA ACTUATOR PLATES

AS YOU LIKE IT

The trend towards individualisation also brings with it increasing demands from customers who are looking for design options in the bathroom that are as diverse as possible. These are often nuances that have to be perfectly coordinated. Actuator plates in new, trendy metal colours can make a small yet significant difference here.

Flush buttons in brass, red gold or black chrome give the actuator plate a particularly elegant appearance.

From 1 April, there will be a new range of high-quality materials available for the popular Sigma50 and recently launched Sigma21, meaning a wealth of possibilities for combining the look of the plates and buttons. Looking for the right design for your own dream bathroom will now become a voyage of discovery.

THE RIGHT TONE

The actuator plate gets its unmistakable look through the selection of the curved flush buttons (on the Sigma50) or the characteristic rings (Sigma21). The popular metal colours red gold, brass and black chrome are new additions here and blend in perfectly with a range of bathroom environments. All three are

coated with a glass ceramic layer that protects the surfaces from damage.

FROM NATURAL TO INDUSTRIAL

With versions in concrete, slate and walnut, the range of new plate materials covers all the bases. You don't need to be a fan of shabby chic or have your own loft to choose the concrete version – the light grey shade is the perfect match for many walls and tiles. The same applies to the natural materials Mustang Slate (Brazilian slate) and walnut, whose unique veins – each plate is one of a kind – appear rugged or earthy and warm, respectively.

Incidentally, did you know that our actuator plates can also be combined with the Geberit DuoFresh odour extraction module? This ensures freshness in the bathroom at all times and also comes with a night-time orientation light and an insert for in-cistern sticks.
